

ADNAN BAWANI

Aspiring AI/ML Engineer • Full-Stack Web Developer • LLM & API Integration • Gen AI & Agentic Automation
intern.adnan5@gmail.com | +91 96650 45753 | Mumbai, India | linkedin.com/in/adnan-bawani | github.com/Adnan-Bawani

PROFESSIONAL SUMMARY

Final Year B.E. Computer Science (AI & ML) student at the University of Mumbai with 1+ year of production experience building and shipping AI-powered full-stack applications for paying clients. Specialises in LLM integration (Anthropic Claude API, OpenAI-compatible endpoints, RAG pipelines), React.js/Node.js full-stack development, and ML-based classification systems. Reduced client delivery cycles by ~60% through AI-assisted development workflows. Seeking an AI/ML or Software Engineering internship to contribute production-ready solutions to a high-impact technical team.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C, C++

Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3, Framer Motion, Redux

Backend: Node.js, Express.js, REST API Development, MongoDB, PostgreSQL, Postman

ML & Data Science: TensorFlow, PyTorch, scikit-learn, pandas, NumPy, XGBoost, Random Forest, Streamlit, Hugging Face (basics)

AI & Generative AI: Anthropic Claude API, OpenAI-compatible APIs, NVIDIA NIM, Prompt Engineering, RAG Pipelines, AI Agents, LLM Integration, LangChain (basics), IBM Watson NLP, Vector Embeddings

Cloud & DevOps: AWS (Solutions Architecture), Microsoft Azure, Vercel, Docker (basics), Git, GitHub, CI/CD, Agile/Scrum

Developer Tools: VS Code, Cursor, Lovable, v0 by Vercel, Antigravity, Figma

EDUCATION

Bachelor of Engineering — Computer Science (AI & ML) | University of Mumbai, Mumbai, Maharashtra, India
Expected: May 2027 | **Specialisation:** Artificial Intelligence & Machine Learning | **Relevant Coursework:** ML, Deep Learning, DSA, DBMS, Computer Networks, Cloud Computing

EXPERIENCE

AI-Driven Full-Stack Developer (Freelance) | Self-Employed — Client Projects | Remote, India *May 2025 – Present*

- Engineered 3+ production web applications for paying clients using AI-assisted development workflows (Cursor, Lovable, v0 by Vercel), reducing average delivery time by ~60% vs. manual build baseline, measured across 3 client projects.
- Integrated Anthropic Claude API and OpenAI-compatible REST endpoints to embed AI chatbots, RAG-powered knowledge pipelines, and smart data processing features into live client products.
- Deployed NVIDIA NIM inference within production apps, reducing AI feature response latency by ~35% and improving real-time user experience.
- Managed end-to-end client projects — requirement gathering → UI design (Figma) → full-stack build (React.js + Node.js + MongoDB) → cloud deployment (Vercel) — independently, following Agile sprint principles.
- Designed prompt engineering strategies and AI agent workflows that automated 3–5 hours/week of repetitive business tasks per project, directly increasing client ROI.
- Containerised apps using Docker for consistent local dev and deployment environments, reducing onboarding friction for client handoffs.

Machine Learning & AI Project Developer | Academic Projects — B.E. Computer Science | University of Mumbai *2024 – 2026*

- Built Student Health Analytics system using Python, pandas, and NumPy to detect burnout risk from 2,000+ college student lifestyle records — achieved 85%+ classification accuracy with Random Forest on a Kaggle dataset.
- Trained supervised classification models using scikit-learn; performed iterative feature engineering across 15+ behavioral and academic indicators, improving precision by 12% over baseline.
- Deployed interactive Streamlit dashboard providing real-time health risk visualisation with SHAP-based feature importance for non-technical stakeholders.

- Applied IBM Watson NLP APIs for text classification; documented model architecture, evaluation metrics, and results in structured technical reports.

Hackathon Participant — Frontend Lead | Team Dreamscope | RIFT '26 | PW Institute of Innovation, Pune Feb 2026

- Led frontend architecture decisions for a cross-functional team in a 24-hour competitive sprint, delivering a fully working AI-powered product demo using rapid React.js prototyping under strict time and resource constraints.
- Awarded Certificate of Appreciation by PW Institute of Innovation judges for the AI-powered solution prototype.

PROJECTS

AI Idea Validator | *React.js, Node.js, Anthropic Claude API, Tailwind CSS, Vercel*

Live: aivalidatorr.vercel.app | GitHub: github.com/Adnan-Bawani/ai-idea-validator

- Built and shipped a live AI-powered web application that delivers instant, structured startup idea evaluations using the Anthropic Claude API — simulating a senior investor's perspective via custom multi-step prompt chains.
- Engineered a RAG-inspired evaluation pipeline: user inputs a startup idea → Claude analyses market viability, competition, monetisation, and execution risk → structured scorecard returned in <3 seconds.
- Deployed on Vercel with sub-200ms TTFB, fully responsive Tailwind CSS UI, and REST API layer built on Node.js/Express.js.
- Product actively live and publicly accessible; demonstrates end-to-end ownership from prompt engineering to production deployment.

Stone Oven — Immersive Restaurant Platform | *Next.js, React.js, TypeScript, Tailwind CSS, Vercel*

Live: v0-stone-oven-boisar-immersive-webs.vercel.app | GitHub: github.com/Adnan-Bawani/Stone-Oven-Boisar

- Engineered a fully responsive restaurant web platform featuring immersive UI/UX, interactive animations, smooth scrolling transitions, and premium visual storytelling.
- Built dynamic menu sections, hero experiences, call-to-action flows, gallery showcases, and mobile-first responsive layouts optimised for customer engagement.
- Implemented performance optimisation, SEO-friendly architecture, and accessibility best practices across the production deployment.
- Demonstrates production-grade frontend architecture with Next.js App Router, TypeScript type safety, and scalable component design deployed on Vercel.

Student Health Analytics — Burnout Risk Detection | *Python, pandas, NumPy, scikit-learn, Random Forest, XGBoost, Streamlit, Kaggle*

GitHub: github.com/Adnan-Bawani/Student-Health-Analytics

- Developed a supervised ML pipeline to classify burnout risk in college students from 2,000+ lifestyle data records (Kaggle), achieving 85%+ classification accuracy with Random Forest.
- Benchmarked against Logistic Regression (76%) and SVM (79%) baselines; applied iterative feature engineering across 15+ behavioral features, improving precision by 12% over baseline.
- Engineered interactive Streamlit dashboard with real-time health risk visualisation and SHAP-based feature importance, making ML insights accessible to non-technical end users.
- XGBoost integration in progress targeting 88%+ accuracy; experiment tracking managed via MLflow.

AI-Powered Client Web Applications (3+ Live) | *React.js, Node.js, Anthropic Claude API, NVIDIA NIM, MongoDB, Vercel, Tailwind CSS*

Portfolio: github.com/Adnan-Bawani

- Shipped 3+ production web applications for paying clients, each featuring embedded LLM capabilities via Anthropic Claude API and OpenAI-compatible REST endpoints with RAG-based document Q&A pipelines.
- Implemented MongoDB as the primary database layer for client apps, handling user sessions, content storage, and analytics event logging.
- Automated 3–5 hours/week of repetitive client business tasks per project through custom AI agent workflows, prompt chaining, and intelligent data processing pipelines.
- Containerised all projects with Docker for reproducible environments; deployed to Vercel with automated CI/CD pipelines via GitHub Actions.

CERTIFICATIONS & INDUSTRY TRAINING

Professional Certifications:

- **Claude with the Anthropic API — Certificate of Completion** — Anthropic — *Mar 2026*
- **Innovating with Google Cloud AI** — Google — *2025*
- **Getting Started with Artificial Intelligence** — IBM — *2025*
- **Essentials of Microsoft Azure** — NCS Digital Services — *2025*
- **Python GUI Mastery** — Udemy — *2024*

Industry Job Simulations (via Forage):

- **Solutions Architecture Job Simulation** — AWS — *2025*
- **Software Engineering Job Simulation** — JPMorgan Chase & Co. — *2025*
- **GenAI Data Analytics Job Simulation** — Tata Group — *2025*
- **Generative AI Job Simulation** — BCG X — *2025*

ACHIEVEMENTS

- RIFT '26 Hackathon — Certificate of Appreciation awarded by PW Institute of Innovation for AI-powered solution prototype delivered within 24-hour sprint (Feb 2026).
- Deployed 2 live, publicly accessible AI/web products as a solo developer — AI Idea Validator and Stone Oven Boisar — from concept to production within the first year of freelancing.
- Achieved 85%+ classification accuracy on Student Health Analytics ML project, outperforming 3 scikit-learn baselines (Logistic Regression 76%, SVM 79%).
