

ADNAN BAWANI

AI/ML Engineer • Web-Stack (MERN) Developer • LLM & API Integration • Gen AI & Agentic Automation
intern.adnan5@gmail.com | +91 96650 45753 | Mumbai, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Final-year B.E. Computer Science (AI & ML) student at the University of Mumbai with 1+ year of hands-on experience building and shipping AI-powered MERN stack applications for paying clients. Skilled in LLM integration (Anthropic Claude API, OpenAI-compatible APIs, RAG pipelines), React.js/Node.js/MongoDB full-stack development, and ML classification systems. Delivered 3+ live client projects — requirement gathering through cloud deployment — independently, reducing delivery cycles by ~60% through AI-assisted development workflows. Seeking a Software Engineering, Full-Stack, or AI/ML internship to contribute production-ready solutions to a high-impact team.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C, C++

Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3, Framer Motion, Redux

Backend & Databases: Node.js, Express.js, MongoDB, PostgreSQL, REST API Development, MERN Stack

ML & Data Science: TensorFlow, PyTorch, scikit-learn, pandas, NumPy, XGBoost, Random Forest, Streamlit, Hugging Face

AI & Generative AI: Anthropic Claude API, OpenAI APIs, NVIDIA NIM, Prompt Engineering, RAG Systems, AI Agent Development, LLM Integration, LangChain (basics), IBM Watson NLP, Vector Embeddings

Cloud & DevOps: AWS (Solutions Architecture), Microsoft Azure, Vercel, Docker, Git, GitHub, CI/CD, Agile/Scrum

Tools & Productivity: VS Code, Cursor, Lovable, v0 by Vercel, Figma, Microsoft Office, MS Excel, Data Entry & Documentation

EDUCATION

Bachelor of Engineering — Computer Science (AI & ML)

Expected: May 2027

University of Mumbai, Mumbai, Maharashtra, India | Specialisation: Artificial Intelligence & Machine Learning

Relevant Coursework: Machine Learning, Deep Learning, DSA, DBMS, Computer Networks, Cloud Computing

EXPERIENCE

AI-Driven Full-Stack Developer (Freelance) | Self-Employed — Client Projects, Remote, IndiaMay 2025 – Present

- Built and delivered 3+ production MERN Stack web applications (React.js, Node.js, Express.js, MongoDB) for paying clients, managing the full project lifecycle from client requirement gathering and UI design (Figma) through cloud deployment on Vercel — independently and on time.
- Integrated Anthropic Claude API and OpenAI-compatible REST endpoints to embed AI chatbots, RAG-powered knowledge pipelines, and smart data processing features into live client products.
- Leveraged AI-assisted development workflows (Cursor, Lovable, v0 by Vercel) to reduce average delivery time by ~60% vs. manual baseline, measured across 3 client projects.
- Deployed NVIDIA NIM inference within production apps, reducing AI feature response latency by ~35% and improving real-time user experience.
- Automated 3–5 hours/week of repetitive client business tasks per project through custom AI agent workflows, prompt engineering, and intelligent data processing pipelines.

Machine Learning & AI Project Developer | Academic Projects — B.E. CS, University of Mumbai2024 – 2026

- Built a Student Health Analytics system using Python, pandas, and NumPy to detect burnout risk from 2,000+ college student records — achieved 85%+ classification accuracy with Random Forest, outperforming Logistic Regression (76%) and SVM (79%) baselines.
- Performed iterative feature engineering across 15+ behavioral and academic indicators, improving model precision by 12% over baseline; managed experiments using MLflow with XGBoost integration targeting 88%+ accuracy.
- Deployed an interactive Streamlit dashboard providing real-time health risk visualisation with SHAP-based feature importance for non-technical stakeholders.

Hackathon Participant — Frontend Lead | Team Dreamscope | RIFT '26, PW Institute of Innovation, Pune Feb 2026

- Led frontend architecture for a cross-functional team in a 24-hour sprint, delivering a working AI-powered product demo using rapid React.js prototyping under strict time and resource constraints.
- Awarded Certificate of Appreciation by PW Institute of Innovation judges for the AI-powered solution prototype.

PROJECTS

AI Idea Validator | *React.js, Node.js, Express.js, Anthropic Claude API, Tailwind CSS, Vercel*

Live: aivalidatorr.vercel.app GitHub: github.com/Adnan-Bawani/ai-idea-validator

- Built and shipped a live AI-powered web application that delivers structured startup idea evaluations by integrating the Anthropic Claude API with custom multi-step prompt chains to simulate a senior investor's perspective.
- Engineered a RAG-inspired evaluation pipeline: user inputs an idea → Claude analyses market viability, competition, monetisation, and execution risk → structured scorecard returned in under 3 seconds.
- Deployed on Vercel with sub-200ms TTFB, fully responsive Tailwind CSS UI, and a REST API layer built on Node.js/Express.js; product is publicly live and demonstrates end-to-end ownership from prompt engineering to production.

NearestDoctor — AI Healthcare Assistant | *React.js, Node.js, Express.js, MongoDB, Anthropic Claude API, Tailwind CSS*

Live: nearest-doctor.vercel.app GitHub: github.com/Adnan-Bawani/NearestDoctor

- Developed a full-stack MERN healthcare platform featuring an AI-powered chatbot (Anthropic Claude API) that triages patient symptoms, recommends relevant doctors, and guides users through appointment booking.
- Built a Doctor Recommendation Engine leveraging geolocation and specialty-matching logic backed by MongoDB, enabling patients to find the nearest available specialist within seconds.
- Designed end-to-end appointment scheduling workflows with real-time slot management, patient session handling via REST APIs, and a clean, mobile-first React.js interface optimised for accessibility.
- Integrated LLM-driven health guidance features that reduce unnecessary clinic visits and improve patient intake efficiency, demonstrating practical AI/ML application in a healthcare context.

Ruflo — Multi-Agent AI Automation System | *Python, LangChain, OpenAI API, Vector Embeddings, MCP Integration, Node.js*

Live: flo.ruv.io GitHub: github.com/Adnan-Bawani/Ruflo

- Architected a multi-agent AI system with orchestration logic that coordinates specialised LLM agents to decompose, delegate, and execute complex user tasks across connected tools and data sources.
- Implemented vector memory (embeddings-based retrieval) to give agents persistent contextual recall across sessions, enabling coherent multi-step reasoning without full prompt repetition.
- Integrated MCP (Model Context Protocol) to standardise tool-calling interfaces between agents and external services, improving modularity and enabling plug-and-play capability extension.
- Designed an LLM coordination layer that routes tasks to the most capable agent, reducing token waste by ~30% compared to single-agent approaches and improving end-to-end task completion accuracy.

CERTIFICATIONS & TRAINING

Professional Certifications: Claude with the Anthropic API (Anthropic, Mar 2026) • Innovating with Google Cloud AI (Google, 2025) • Getting Started with AI (IBM, 2025) • Microsoft Azure Essentials (NCS Digital, 2025) • Python GUI Mastery (Udemy, 2024)

Industry Simulations (Forage): Solutions Architecture — AWS • Software Engineering — JPMorgan Chase • GenAI Data Analytics — Tata Group • Generative AI — BCG X

ACHIEVEMENTS

- RIFT '26 Hackathon — Certificate of Appreciation awarded by PW Institute of Innovation for AI-powered solution delivered in a 24-hour sprint (Feb 2026).
- Deployed 2 publicly accessible AI/web products as a solo developer — AI Idea Validator and NearestDoctor — from concept to production within the first year of freelancing.
- Achieved 85%+ classification accuracy on Student Health Analytics ML project, outperforming 3 scikit-learn baselines (Logistic Regression 76%, SVM 79%).
